Allstate
IDENTITY PROTECTION

Security is our top priority

Digital security is always changing, so we are constantly evolving our approach with responsive protection systems that blend proven measures with cutting-edge technology. We're dedicated to keeping your data safe.

Your personal data is secured
Our state-of-the-art data centers are SSAE 18 SOC1 and SOC2 Type 2 accredited. All our facilities are protected 24/7 via a comprehensive network of physical barriers, rigorous access control, and surveillance measures such as CCTV cameras.

Continuous monitoring
We continuously test our internal systems for vulnerabilities and carry out extensive manual code reviews to uncover emerging threats. We know it's important to constantly assess and evolve our methods to be sure we remain ahead of potential threats.

Rigorous standards
We protect sensitive information using advanced encryption standards. To further ensure a top-notch security profile, our infrastructure is enhanced with access controls such as adaptive authentication.

Trained, verified employees
Only a selection of approved employees can access personally identifiable information via our secure, encrypted connections. Additionally, all of our employees are thoroughly vetted, undergoing background checks and drug testing.

Two-factor authentication
Our Allstate Identity Protection portal is protected by two-factor authentication to help ensure your data stays secure.

Our security policies

- ✔ SSAE SOC1 and SOC 2 Type 2 accredited

- ✔ Secure application development (OWASP)

- ✔ Security staff certifications:
  - CISSP
  - CISA
  - GIAC

- ✔ Certified data protection officer
